Title : Area and volume of buildings – Terminology and measurement

Scope : This standard includes definitions of the concepts of surface area and calculation of building volume, information on their application and scope, as well as rules for the calculation and reporting of the area and volume of buildings and parts of built space.

This standard is intended to apply for the calculation of area and volume for all types of buildings. It applies to both new building developments and changes in existing buildings. It can be used for various types of planning (buildings and physical planning) and construction planning documents such as building permits, tax assessments, property assessments, calculation of rental fees, management and maintenance costs and statistical operations, etc.

Title : Uncertainty of measurement - Part 3: Guide to the expression of uncertainty in measurement (GUM:1995)

Scope : This Guide establishes general rules for evaluating and expressing uncertainty in measurement that can be followed at various levels of accuracy and in many fields — from the shop floor to fundamental research. Therefore, the principles of this Guide are intended to be applicable to a broad spectrum of measurements, including those required for:

- maintaining quality control and quality assurance in production;
- complying with and enforcing laws and regulations;
- conducting basic research, and applied research and development, in science and engineering;
- calibrating standards and instruments and performing tests throughout a national measurement system in order to achieve traceability to national standards;
- developing, maintaining, and comparing international and national physical reference standards, including reference materials.
