Title : Building and civil engineering works - Digital management of the informative processes - Part 9: Classification, naming and coding systems

Scope : This standard defines a system of digital information classes (information classification), national real-world, aimed at the construction and real estate supply chain. The national information classification system has direct correlation with UNI EN ISO 16739-1 for the classes already covered in it and UNI EN ISO 12006-2. The National Information Classification System of Construction is defined by interactions of individual domains, ontologies and semantics and assists in the definition of specific taxonomies through coding schemes and naming the elements of the supply chain entities (assets, actors, actions), according to the individual purposes of necessary use.

Title : Concrete with fibres. Test method for the characterisation of the flexural tensile strength of strain hardened concretes.

Scope : This standard specifies a method for determining the flexural tensile strength of fibre-reinforced concrete on moulded specimens. The method makes it possible to determine a set of values for the residual flexural tensile strength.

This test method is intended for concretes showing strain-hardening flexural behaviour beyond the elastic range of the bending response, with an increasing load-shrinkage curve up to its maximum load, without steep dips, and fulfilling the conditions given in 3.8.

This test method is intended for fibres of any type and combination with a maximum length of 40 m.

Title : Plastics piping systems. Multilayer pipe systems for gas installations pipework with a maximum operating pressure up to and including 5 bar (500 kPa). Part 2: Design, installation and maintenance

Scope : This part of UNE 53008 specifies the practice that must be followed in the design, installation and maintenance of a multilayer pipe channeling system in accordance with the UNE 53008 1 Standard for gas receiving facilities supplied at a maximum operating pressure. (MOP) less than or equal to 5 bar.

This part of UNE 53008 is subject to what is indicated in the current regulations applicable to gas receiving installations and in the corresponding chapters of UNE 60670 3, UNE 60670 4 and UNE 60670 8, whose provisions prevail over those of this rule. This document is prepared in order to complement and apply jointly with said regulations.

NOTE The regulations in force at the time of preparation of this standard are the Technical Regulations for the distribution and use of gaseous fuels, approved by RD 919/2006 and its subsequent modifications.

Title : Vibration and shock – Measurement systems – Part 1: Measurement for assessing the impact of vibrations on buildings and facilities
Scope : This document is intended to be applied to measurement systems used to assess the risk of damage to buildings and facilities due to ground-borne vibrations. This document specifies technical requirements for measurement systems and measuring equipment in terms of performance specifications and tolerance limits. The document also outlines requirements for the calibration of measuring equipment. Additionally, this document provides guidance on how measuring equipment should be positioned and installed on the test object. The measurement systems specified in this document can consist of a combination of various types of measuring equipment, such as instruments, sensors, and recording units, as well as computer-based data collection and analysis systems. The measurement systems specified in this document are intended to measure and record vibrations from various sources, including different types of construction work such as blasting, piling, compaction, and excavation.

Title :	External thermal insulation composite systems (ETICS) - Part 1: Planning and processing		
Scope :	The present Austrian Standard includes basic principles for planning and processing of external thermal insulation composite systems (ETICS) in building construction and applies to all insulating material thicknesses. This ÖNORM shall be used for external thermal insulation composite systems (ETICS) on external building parts, on vertical surfaces as well as on surfaces which are not directly exposed to weathering (e.g. soffits). It only applies to bonded ETICS and to bonded ETICS with additional mechanical fixing and contains the basics for the standard safety proof. The ETICS have to provide a declaration of performance and to comply with the requirements according to ÖNORM B 6400-2. The connection of ETICS to windows and door height windows is not part of this ÖNORM. Perimeter insulation is also not addressed in this ÖNORM.

Title : Rolling bearings — Tolerances — Part 2: Measuring and gauging principles and methods (ISO 1132-2:2001)
Scope : This part of ÖNORM ISO 1132 establishes guidelines for measurement of dimensions, running accuracy and internal clearance of rolling bearings. The purpose is to outline the fundamentals of various measuring and gauging principles which may be used in order to clarify and comply with the definitions of ISO 1132-1 and ISO 5593.
The measuring and gauging methods described in this part of ÖNORM ISO 1132 may differ amongst themselves and do not provide for a unique interpretation. It is recognized that there are other adequate measuring and gauging methods and that technical development may result in even more convenient methods. Therefore, this part of ÖNORM ISO 1132 does not imply any obligation to apply any particular method. However, the methods specified may be referred to in cases of dispute

Title : Guidelines for the design of fully automated passenger transport systems with rope traction.
Scope : The technical report is aimed at outlining the procedural principles to which reference should be made for the outline design of a fully-automated people transport system with rope traction, recognisable in the literature as APM (Automated People Mover). These are transport systems with a fixed installation, equipped with a central control station, which do not necessarily require the presence of personnel on the vehicles or at the stations; they are characterised by vehicles operating on reserved transit routes, with variable gradients and tortuosity, whose main traction is entrusted to one or more rope loops and whose speed can be cancelled at the stations.

ICS :	13.280		
National Ref :	ÖNORM S 5275-1		
Title :	Nuclear medical therapy - Criteria for the discharge - Part 1: Calculation method by applying standardized conditions		
Scope :	<p>This ÖNORM contains instructions for determining the maximum permissible discharge activities, compliance with which ensures that the maximum permissible effective doses are not exceeded by people who come into contact with a therapy patient after their discharge. The maximum permissible discharge activities determined according to these instructions are given in tabular form for all radionuclides currently in common use.</p> <p>This ÖNORM presents a calculation method that is based on simplifying, conservative assumptions. With the exception of iodine exhalation, the biokinetic properties of the applied radioactive substances are not taken into account. Procedures for determining the discharge activities, which also take into account the biokinetics of the radioactive substances applied, are specified in ÖNORM S 5275-2.</p> <p>The discharge activities determined according to this ÖNORM are based on assumptions for the discharge of the patient to the home environment. They may be unsuitable for the inpatient admission of patients to a ward other than that of the nuclear medicine facility if necessary for medical reasons.</p> <p>This ÖNORM contains content-related specifications regarding the information sheet to be given to the patient. Examples of calculations, an example of the patient information sheet and dose values for some exposures are provided for information purposes.</p> <p>The calculation formalism and other instructions described in this ÖNORM can also be used for nuclear medicine diagnostics.</p>
